PROFESSIONAL SUMMARY

Information Systems graduate with practical project experience across cloud infrastructure, IT workflow automation, business intelligence, and AI-enabled applications. Built containerized solutions and data pipelines using Azure, Terraform, Docker, GitHub Actions, n8n, Python, PostgreSQL, Power BI, and generative AI tools, with emphasis on repeatable deployment, controlled operations, and measurable service outcomes.

EDUCATION

Bachelor of Science in Information Systems | *Umm Al-Qura University (UQU), Makkah, Saudi Arabia* | Aug 2021 - Aug 2025

TRAINING AND CERTIFICATIONS

Cloud Computing Bootcamp | *Saudi Digital Academy (SDA)* | Aug 16, 2026 - Oct 1, 2026 | *In Progress*

- Currently completing an intensive cloud computing bootcamp focused on practical cloud concepts and implementation skills.

Building Natural Language Processing Applications | *Tuwaiq Academy* | *Accredited by NVIDIA* | Aug 2026 | *Completed*

- Completed hands-on training in NLP principles, Transformer architectures, and pre-trained language models using NVIDIA AI tools and libraries.
- Built and evaluated Python-based NLP applications for workflow automation and real-world organizational use cases; earned an official NVIDIA certificate.

PROJECTS

Internal IT Automation and Analytics Platform | *n8n, Azure, PostgreSQL, Power BI*

- Developed a local pilot that orchestrates IT support requests, AI-assisted triage, approval gates, controlled remediation, verification, escalation, and audit-ready ticket records.
- Designed cloud-ready deployment assets using Terraform, Docker Compose, Linux, Bash, Azure networking, managed PostgreSQL, Key Vault, monitoring, and backup patterns.
- Created SQL reporting views, Power Query assets, and DAX measures for ticket volume, backlog, MTTR, automation success, verified actions, and seven-day reopen rates.
- Added GitHub Actions CI validation for repository changes and applied idempotency, scoped credentials, allowlisted runbooks, and fail-closed policy controls.

OpenRouter RAG Chatbot | *Cloud and AI Application*

- Built a FastAPI and Streamlit chatbot with OpenRouter model access, streaming responses, persistent conversations, and REST API integration.
- Implemented PDF question answering with LangChain, Chroma vector search, document-scoped retrieval, and history-aware question reformulation.
- Containerized the application and integrated PostgreSQL, Azure Blob Storage support, and Terraform templates for an Azure Linux VM and network resources.

Career Application | *Graduation Project* | *Umm Al-Qura University* | Oct 2024 - Feb 2025

- Contributed to a Flutter and Dart mobile application that integrated the Gemini API for personalized academic-path recommendations.
- Supported system architecture, logic mapping, database interactions, and structured data flow for reliable user experiences.

TECHNICAL SKILLS

Cloud and DevOps: Microsoft Azure, Terraform, Docker, Docker Compose, Linux, Bash, GitHub Actions, CI/CD, infrastructure as code, YAML, networking fundamentals

Automation and AI: n8n, Gemini API, OpenRouter, LangChain, Chroma, RAG, NLP fundamentals, workflow orchestration, webhooks, approval workflows

Data and BI: SQL, PostgreSQL, Power BI, Power Query and M, DAX, data modeling, reporting views, KPI design, ETL and ELT concepts, Microsoft Excel

Development: Python, FastAPI, REST APIs, Git, GitHub, Java fundamentals, data structures, Flutter, Dart

Systems and Operations: System analysis, SDLC, ticket lifecycle, root-cause analysis, runbooks, SLA and MTTR concepts, monitoring, access-control concepts

CORE COMPETENCIES

Cloud architecture | Automation | Data analysis | Troubleshooting | Technical documentation | Team collaboration

LANGUAGES

- Arabic: Native
- English: Professional Working Proficiency
